

Submission Worksheet

Submission Data

Course: IT202-007-F2025

Assignment: Milestone 2 API Testing

Student: Dylan G. (dg599)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 10.00/10.00 (100.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 11/17/2025 9:10:00 AM

Updated: 11/17/2025 2:19:28 PM

Instructions

- Overview Link: <https://youtu.be/86v8Ak0E3XE>
- 1. Ensure you read all instructions and objectives before starting.
- 2. Ensure you added your API choice to the Google doc shared on Canvas (selections must be unique, no two students can use the same exact API)
- 3. Create a new branch from Milestone2 called M7-Homework
 - 1. `git checkout Milestone2` (ensure proper starting branch)
 - 2. If you don't have Milestone2 yet, create it from Milestone1
 - 3. `git pull origin Milestone2` (ensure history is up to date)
 - 4. `git checkout -b M7-Homework` (create and switch to branch)
- 4. Follow the lesson from
 - Add `testApi.php` to your project folder
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M7 HW baseline files"`
 - `git push origin M7-Homework`
 - Create a Pull Request from M7-Homework to Milestone2 and keep it open
- 5. Fill out the below worksheet
 - Ensure you add the UCID/Date and details comments as you work
 - Get the example working with your chosen API
- 6. Once finished, click "Submit and Export"
- 7. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 - 1. `git add .`
 - 2. `git commit -m "adding PDF"`
 - 3. `git push origin M7-Homework`
 - 4. On Github merge the pull request from M7-Homework to Milestone2
 - 5. On Github create and merge the pull request from Milestone2 to dev
 - 6. On Github create a pull request from dev to prod and immediately merge. (This will trigger the prod deploy to make the Heroku prod links work)

8. Upload the same PDF to Canvas

9. Sync Local

1. git checkout dev
2. git pull origin dev
3. git checkout Milestone2
4. git pull origin Milestone2

Section #1: (2 pts.) Analyze Api Choice

Progress: 100%

Task #1 (0.40 pts.) - API Link

Progress: 100%

URL #1

https://rapidapi.com/eu-QaXsyBmEj/api/cars-database-with-image/playground/apiendpoint_f757570c-ee35-470c-9df1-f4ff38676608

URL

https://rapidapi.com/eu-QaXsyBmEj/api/cars-database-with-image/playground/apiendpoint_f757570c-ee35-470c-9df1-f4ff38676608

Saved: 11/17/2025 9:10:00 AM

Task #2 (0.80 pts.) - Quota and Limitations

Progress: 100%

Your Response:

Requests:

100 requests (hard limit)

Rate Limit:

1000 request per hour

Bandwidth Platform fee:

10240 MB per month

Saved: 11/17/2025 9:12:00 AM

Task #3 (0.80 pts.) - Goal Data

Progress: 100%

Details:

- Clearly note what type of data you'll be using
- Clearly note the specific properties you intend to use (it's likely not all of them)

The data that i will be using is the brand, make, model, year, horsepower, suv/coupe, mpg, engine size. So the specific properties that will be giving me this data is the id, title, content, additional and wr.

```
def test_get_all_cars(self):
    """Test the GET /cars endpoint"""
    response = self.client.get('/cars')
    assert response.status_code == 200
    assert isinstance(response.json(), list)
    assert len(response.json()) > 0

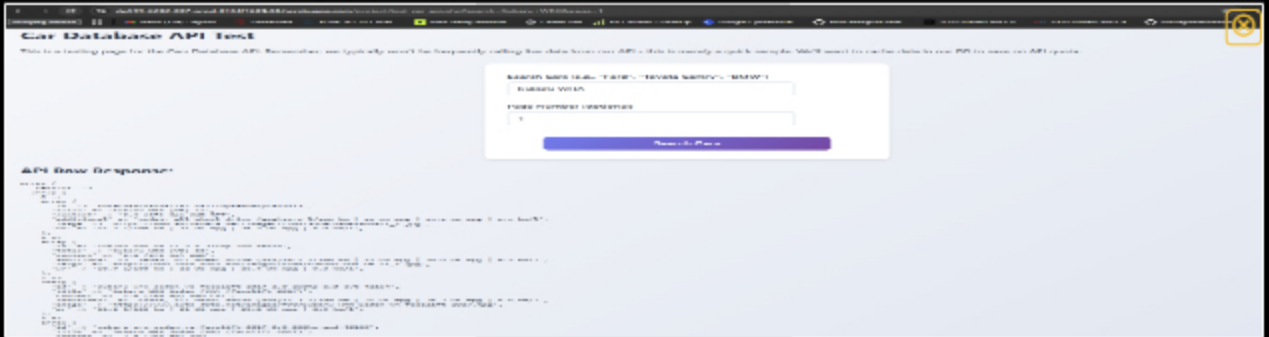

def test_get_car_by_id(self):
    """Test the GET /cars/{id} endpoint"""
    car_id = 1
    response = self.client.get(f'/cars/{car_id}')
    assert response.status_code == 200
    assert isinstance(response.json(), dict)
    assert response.json().get('id') == car_id

def test_create_car(self):
    """Test the POST /cars endpoint"""
    new_car = {
        'make': 'Ford',
        'model': 'Mustang',
        'year': 2020,
        'color': 'Red'
    }
    response = self.client.post('/cars', json=new_car)
    assert response.status_code == 201
    assert isinstance(response.json(), dict)
    assert response.json().get('id') is not None

def test_update_car(self):
    """Test the PUT /cars/{id} endpoint"""
    car_id = 1
    updated_car = {
        'make': 'Ford',
        'model': 'Mustang',
        'year': 2021,
        'color': 'Blue'
    }
    response = self.client.put(f'/cars/{car_id}', json=updated_car)
    assert response.status_code == 200
    assert isinstance(response.json(), dict)
    assert response.json().get('year') == 2021

def test_delete_car(self):
    """Test the DELETE /cars/{id} endpoint"""
    car_id = 1
    response = self.client.delete(f'/cars/{car_id}')
    assert response.status_code == 204
```

Part 3:

Progress: 100%

Details:

Briefly explain what you needed to do in order to get this test working

Your Response:

So to get this test working I needed to change the endpoint at first I had the wrong endpoint and it took me some time to find the right one which was the the exact one from rapidapi when you look at the code in php form. Before that though I made sure to have the API key in my .env so it was accessible to all my other files like the helper files and this test file. Another issue I ran into when getting this test to work was it was doing an advanced search and it was working properly so I changed the code so it went for the simplified search which on the front end it only gives one input field for search and in the code the change was the search field change with q paramter similar to how the rapid api code worked.

Saved: 11/17/2025 2:03:10 PM

Task #2 (0.67 pts.) - WakaTime - Activity

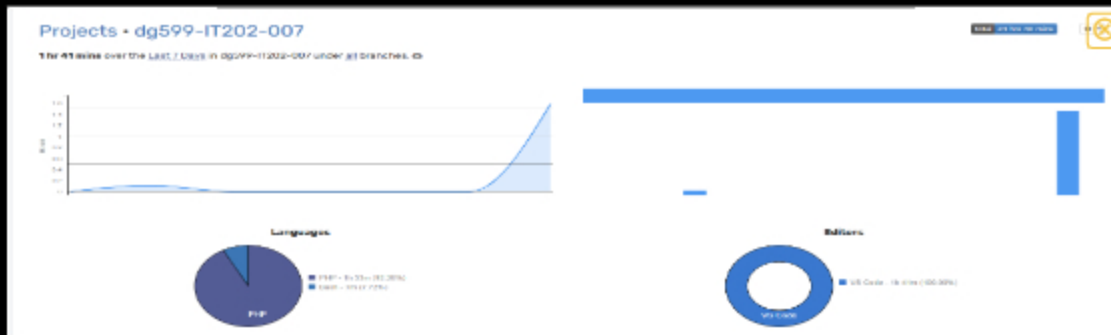

Progress: 100%

Details:

- Visit the WakaTime.com Dashboard
- Click **Projects** and find your repository
- Capture the overall time at the top that includes the repository name
- Capture the individual time at the bottom that includes the file time
- Note: The duration isn't relevant for the grade and the visual graphs aren't necessary

Task #3 (0.67 pts.) - Reflection

Progress: 100%

Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

I learned that you are able to implement api's into a website to get data. Before hand I didn't know how websites would get information for queries. I also learned how to integrate an api on to a webpage. I learned that you need to have the right endpoint for the api to integrate properly.

Saved: 11/17/2025 1:35:42 PM

⇒ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of this assignment was choosing the api I wanted. It was also adding in the api key to the helper files.

Saved: 11/17/2025 1:30:03 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part was getting the api to integrate properly so it would search the brand/make/year properly at first when i made a search i would get an endpoint error. After a couple different endpoint links that I tried i got it to integrate but then I had a problem where it was giving me a set data no matter what brand/make/year i put in the search.
